VISION RESEARCH

Founded by THORNE SHIPLEY

BOARD OF EDITORS

Distributing Editor for the North and South American Continents:

C. D. B. BRIDGES
Department of Biological Sciences
Lilly Hall of Life Sciences
Purdue University
West Lafayette, IN 47907
U.S.A.

Vicki Lynn Burch—Editorial Assistant

Distributing Editor for Europe, Africa and Australasia:

H. SPEKREIJSE
The Netherlands Ophthalmic Research Institute and The Laboratory of Medical Physics
University of Amsterdam
P.O. Box 12011, 1100 AA Amsterdam-Zuidoost
The Netherlands

Els Borghols—Editorial Assistant

Chairman: G. WESTHEIMER, Berkeley, California, U.S.A.

Part A

Biochemistry, Molecular & Cell Biology, Electrophysiology, Morphology

P. O. BISHOP, Sydney, Australia
C. D. B. BRIDGES, West Lafayette, Ind. U.S.A.
A. L. BYZOV, Moscow, U.S.S.R.
P. A. HARGRAVE, Gainesville, Fla, U.S.A.
J. G. HOLLYFIELD, Houston, Tex., U.S.A.
A. KANEKO, Okazaki, Japan
H. KOLB, Salt Lake City, Utah, U.S.A.
K. NAKAYAMA, San Francisco, Calif., U.S.A.
P. SCHILLER, Cambridge, Mass., U.S.A.
P. D. SPEAR, Madison, Wis., U.S.A.
H. SPEKREIJSE, Amsterdam, The Netherlands
D. VAN NORREN, Soesterberg, The Netherlands

Part B

Psychophysics, Eye Movements, Physiological Optics

N. BARMACK, Portland, Ore., U.S.A.
J. BERGEN, Princeton, N.J., U.S.A.
O. J. BRADDICK, Cambridge, U.K.
H. COLLEWIJN, Rotterdam, The Netherlands
R. FOX, Nashville, Tenn., U.S.A.
J. KRAUSKOPF, New York, N.Y., U.S.A.
D. M. LEVI, Houston, Tex., U.S.A.
M. MORGAN, London, U.K.
R. SEKULER, Evanston, Ill., U.S.A.
D. Y. TELLER, Seattle, Wash., U.S.A.
B. A. WANDELL, Stanford, Calif., U.S.A.
G. WESTHEIMER, Berkeley, Calif., U.S.A.

Publishing Office: Pergamon Journals Ltd, Journals Production Unit, Hennock Road, Marsh Barton, Exeter, Devon EX2 8NE, England (*Tel.* Exeter (0392) 51558; *Telex* 42749)

Subscription and Advertising Offices: Pergamon Journals Ltd, Headington Hill Hall, Oxford OX3 0BW, England (*Tel.* Oxford (0865) 64881)
Pergamon Journals Inc., Maxwell House, Fairview Park, Elmsford, NY 10523, U.S.A.

Published Monthly

Annual institutional subscription rate (1988) DM 1245.00; 2-year institutional rate (1988/89) DM 2365.50; personal subscription rate for those whose library subscribes at the regular rate (1988) DM 181.00. Subscriptions enquiries from customers in North America should be sent to: Pergamon Journals Inc., Maxwell House, Fairview Park, Elmsford, NY 10523, U.S.A., and for the remainder of the world to: Pergamon Journals Ltd, Headington Hill Hall, Oxford OX3 0BW, England. Prices are subject to amendment without notice.

Microform Subscriptions and Back Issues

Back issues of all previously published volumes are available in the regular editions and on microfilm and microfiche. Current subscriptions are available on microfiche simultaneously with the paper edition, and on microfilm on completion of the annual index at the end of the subscription year.

Copyright © 1988 Pergamon Journals Limited

It is a condition of publication that manuscripts submitted to this journal have not been published and will not be simultaneously submitted or published elsewhere. By submitting a manuscript, the authors agree that the copyright for their article is transferred to the publisher if and when the article is accepted for publication. However, assignment of copyright is not required from authors who work for organizations which do not permit such assignment. The copyright covers the exclusive rights to reproduce and distribute the article, including reprints, photographic reproductions, microform or any other reproductions of similar nature and translations. No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, electrostatic, magnetic tape, mechanical, photocopying, recording or otherwise, without permission in writing from the copyright holder.

Photocopying information for users in the U.S.A. The Item-fee Code for this publication indicates that authorization to photocopy items for internal or personal use is granted by the copyright holder for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service provided the stated fee for copying beyond that permitted by Section 107 or 108 of the U.S. Copyright Law is paid. The appropriate remittance of $3.00 per copy per article is paid directly to the Copyright Clearance Center Inc., 27 Congress Street, Salem, MA 01970. *Permission for other use.* The copyright owner's consent does not extend to copying for general distribution, for promotion, for creating new works, or for resale. Specific written permission must be obtained from the publisher for such copying.

The Item-fee Code for this publication is: 0042-6989/88 $3.00 + 0.00

AUTHOR/SUBJECT INDEX FOR VOLUME 27 (1987)

AUTHOR INDEX

ADAMS, A.J.
Pease, P.L., Adams, A.J. and Nuccio, E. Optical density of human macular pigment 27: 705.

ADAMS, J.I.
Wallman, J. and Adams, J.I. Developmental aspects of experimental myopia in chicks: susceptibility, recovery and relation to emmetropization 27: 1139.

AHMED, B.
Ahmed, B. and Hammond, P. On the spatial mismatch of rod and cone mediated inputs to cat retinal ganglion cells 27: 1223.

AIBA, T.S.
Mitsuboshi, M., Funakawa, M., Kawabata, Y. and Aiba, T.S. Temporal integration in human vision and the opponent-color systems 27: 1187.
Mitsuboshi, M., Kawabata, Y. and Aiba, T.S. Color-opponent characteristics revealed in temporal integration time 27: 1197.

ALBRIGHT, T.D.
Rodman, H.R. and Albright, T.D. Coding of visual stimulus velocity in area mt of the macaque 27: 2035.

ALEXANDER, K.R.
Peachey, N.S., Alexander, K.R. and Fishman, G.A. Rod and cone system contributions to oscillatory potentials: an explanation for the conditioning flash effect 27: 859.
Alexander, K.R., Kilbride, P.E., Fishman, G.A. and Fishman, M. Macular pigment and reduced foveal short-wavelength sensitivity in retinitis pigmentosa 27: 1077.

ALPERN, M.
Alpern, M., Fulton, A.B. and Baker, B.N. "Self-screening" of rhodopsin in rod outer segments 27: 1459.
Alpern, M. A note on the action spectrum of human rod vision 27: 1471.
Alpern, M., Kitahara, H. and Fielder, G.H. The change in color matches with retinal angle of incidence of the colorimeter beams 27: 1763.

ANDERSON, S.J.
Anderson, S.J. and Burr, D.C. Receptive field size of human motion detection units 27: 621.

ANSTIS, S.
Anstis, S. and Ramachandran, V.S. Visual inertia in apparent motion 27: 755.

ANTON, S.
Kowler, E. and Anton, S. Reading twisted text: implications for the role of saccades 27: 45.

ARCHER, S.M.
Archer, S.M., Miller, K.K. and Helveston, E.M. Stereoscopic contours and optokinetic nystagmus in normal and stereoblind subjects 27: 841.

ARCHER, S.N.
Archer, S.N., Endler, J.A., Lythgoe, J.N. and Partridge, J.C. Visual pigment polymorphism in the guppy Poecilia reticulata 27: 1243.

ARDEN, G.B.
Vaegan and Arden, G.B. Effect of pattern luminance profile on the pattern ERG in man and pigeon 27: 883.

ARNOLD, K.
Arnold, K. and Neumeyer, C. Wavelength discrimination in the turtle Pseudemys scripta elegans 27: 1501.

ASLIN, R.N.
Aslin, R.N. and Shea, S.L. The amplitude and angle of saccades to double-step target displacements 27: 1925.

AUGUSTEYN, R.C.
Pierscionek, B., Smith, G. and Augusteyn, R.C. The refractive increments of bovine (*a-, (*b- and (*g-crystallins 27: 1539.

AYALA, C.
Jaffe, E.H., Urbina, M., Ayala, C. and Chemello, M.E. Serotonin containing neurons in the retina of the teleost Eugerres plumieri 27: 2015.

AYOUB, G.S.
Ayoub, G.S. and Lam, D.M.-K. Accumulation of (*g-aminobutyric acid by horizontal cells isolated from the goldfish retina 27: 2027.

BADCOCK, D.R.
Badcock, D.R. and Derrington, A.M. Detecting the displacements of spatial beats: a monocular capability 27: 793.

BAEDEKER, C.
Baedeker, C. and Wolf, W. Influence of saccades on manual reactions--a reaction time and VEP study 27: 609.

BAKER, B.N.

Alpern, M., Fulton, A.B. and Baker, B.N. "Self-screening" of rhodopsin in rod outer segments 27: 1459.

BALL, K.
Ball, K. and Sekuler, R. Direction-specific improvement in motion discrimination 27: 953.

BANKS, M.S.
Banks, M.S., Geisler, W.S. and Bennett, P.J. The physical limits of grating visibility 27: 1915.

BARBEITO, R.
Barbeito, R., Bedell, H.E., Flom, M.C. and Simpson, T.L. Effects of luminance on the visual acuity of strabismic and anisometropic amblyopes and optically blurred normals 27: 1543.

BAYLIS, G.C.
Rolls, E.T., Baylis, G.C. and Hasselmo, M.E. The responses of neurons in the cortex in the superior temporal sulcus of the monkey to band-pass spatial frequency filtered faces 27: 311.

BEAZLEY, L.D.
Dunlop, S.A., Longley, W.A. and Beazley, L.D. Development of the area centralis and visual streak in the grey kangaroo Macropus fuliginosus 27: 151.
Coleman, L.-A., Harman, A.M. and Beazley, L.D. Displaced retinal ganglion cells in the wallaby Setonix brachyurus 27: 1269.

BEDELL, H.E.
Barbeito, R., Bedell, H.E., Flom, M.C. and Simpson, T.L. Effects of luminance on the visual acuity of strabismic and anisometropic amblyopes and optically blurred normals 27: 1543.

BENIMOFF, N.I.
Hayhoe, M.M., Benimoff, N.I. and Hood, D.C. The time-course of multiplicative and subtractive adaptation process 27: 1981.

BENJAMIN, D.
Mack, A., Goodwin, J., Thordarsen, H., Benjamin, D., Palumbo, D. and Hill, J. Motion aftereffects associated with pursuit eye movements 27: 529.

BENNETT, P.J.
Banks, M.S., Geisler, W.S. and Bennett, P.J. The physical limits of grating visibility 27: 1915.

BERSON, E.L.
Sandberg, M.A., Pawlyk, B.S., Crane, W.G., Schmidt, S.Y. and Berson, E.L. Effects of IBMX on the ERG of the isolated perfused cat eye 27: 1421.

BIRCH, D.G.
Birch, E.E. and Birch, D.G. Pupillometric measures of retinal sensitivity in infants and adults with retinitis pigmentosa 27: 499.
Enoch, J.M., Hamer, R.D., Lakshminarayanan, V., Yasuma, T., Birch, D.G. and Yamade, S. Effect of monocular light exclusion on the Stiles-Crawford function 27: 507.
Birch, D.G. and Sandberg, M.A. Dependence of cone b-wave implicit time on rod amplitude in retinitis pigmentosa 27: 1105.

BIRCH, E.E.
Birch, E.E. and Birch, D.G. Pupillometric measures of retinal sensitivity in infants and adults with retinitis pigmentosa 27: 499.

BLAKE, R.
Halpern, D.L., Patterson, R. and Blake, R. What causes steroscopic tilt from spatial frequency disparity 27: 1619.

BOCK, O.
Ott, D., Eckmiller, R. and Bock, O. A head-mounted device for measurement of pointing to visual targets without seeing the pointing arm 27: 307.

BOLANOWSKI, S.J. JR.
Bolanowski, S.J. Jr. and Doty, R.W. Perceptual "blankout" of monocular homogeneous fields (Ganzfelder) is prevented with binocular viewing 27: 967.
Bolanowski, S.J. Jr. Contourless stimuli produce binocular brightness summation 27: 1943.

BON, L.
Bon, L., Chiarelli, F. and Lucchetti, C. A new technical approach to monkey visual training 27: 41.

BONAVENTURE, N.
Bonaventure, N., Jardon, B., Wioland, N. and Rudolf, G. Physiological effects of muscarinic vs nicotinic ACh antagonists upon ganglion cell activity in the frog retina 27: 2061.

BONDS, A.B.
Bonds, A.B., Casagrande, V.A., Norton, T.T. and DeBruyn, E.J. Visual resolution and sensitivity in a nocturnal primate (Galago) measured with visual evoked potentials 27: 845.

BOURASSA, C.M.
Stelmach, L.B., Bourassa, C.M. and Di Lollo, V. On and Off systems in human vision 27: 919.
Bourassa, C.M., Di Lollo, V. and Stelmach, L.B. Comment on reply of Wilson and Phillips: general agreement 27: 1397.
BOWMAKER, J.K.
Bowmaker, J.K. and Kunz, Y.W. Ultraviolet receptors, tetrachromatic colour vision and retinal mosaics in the brown trout (Salmo trutta): age-dependent changes 27: 2101.
BOYAPATI, J.
Boyapati, J. and Henry, G.H. The duplex character of the corticofugal pathway from the striate cortex to the lateral geniculate complex of the cat 27: 723.
BOYNTON, R.M.
Uchikawa, K. and Boynton, R.M. Categorical color perception of Japanese observers: comparison with that of Americans 27: 1825.
Eskew, R.T. Jr. and Boynton, R.M. Effects of field area and configuration on chromatic and border discriminations 27: 1835.
Montag, E.D. and Boynton, R.M. Rod influence in dichromatic surface color perception 27: 2153.
BRADLEY, A.
Bradley, A. and Skottun, B.C. Effects of contrast and spatial frequency on vernier acuity 27: 1817.
BRIDGEMAN, B.
Nemire, K. and Bridgeman, B. Oculomotor and skeletal motor systems share one map of visual space 27: 393.
BRIDGES, C.D.B.
Bridges, C.D.B., Foster, R.G., Landers, R.A. and Fong, S.-L. Interstitial retinol-binding protein and cellular retinal-binding protein in the mammalian pineal 27: 2049.
BRONSTEIN, A.M.
Bronstein, A.M. and Kennard, C. Predictive eye saccades are different from visually triggered saccades 27: 517.
BROWN, A.M.
Brown, A.M., Dobson, V. and Maier, J. Visual acuity of human infants at scotopic, mesopic and photopic luminances 27: 1845.
BUCK, S.L.

SUBJECT INDEX

ABERRATION
Perception of random-dot symmetry and apparent movement at and near isoluminance 27: 547.
Dioptric and non-dioptric stimuli for accommodation: target size alone and with blur and chromatic aberation 27: 555.
The optics of comparative ophthalmoscopy 27: 599.

ABSOLUTE THRESHOLD (SEE DETECTION THRESHOLD)

ACCOMMODATION
Changes in corneal curvature during accommodation in chicks 27: 241.
Dioptric and non-dioptric stimuli for accommodation: target size alone and with blur and chromatic aberation 27: 555.
Compensatory eye movements during active head rotation for near targets: effects of imagination, rapid head oscillation and vergence 27: 1639.
The effects of optical vergence, contrast, and luminance on the accommodative response to spatially bandpass filtered targets 27: 1797.
Accommodation in infants as measured by photorefraction 27: 2141.

ACUITY (SEE ALSO STEREOPSIS; HYPERACUITY)
Visual resolution and sensitivity in a nocturnal primate (Galago) measured with visual evoked potentials 27: 845.
Contrast sensitivity and visual acuity of the pigmented rat determined electrophysiologically 27: 1719.
Visual acuity of human infants at scotopic, mesopic and photopic luminances 27: 1845.
Spatial visual acuity of the falcon, Falco berigora: a behavioural, optical and anatomical investigation 27: 1859.
The binocular depth stereoacuity of the pigeon and its relation to the anatomical resolving power of the eye 27: 1967.
Vision beyond the resolution limit: aliasing in the periphery 27: 2193.

ADAPTATION
Flicker adaptation in the peripheral retina 27: 277.
Light-dependent synaptic delay between photoreceptors and horizontal cells in the tiger salamander retina 27: 363.
Effects of light and dark environments on macaque and human fixational eye movements 27: 401.
Saturation of the tilt aftereffect 27: 1041.
Adaptive changes in post-saccadic drift induced by patching one eye 27: 1299.
Confounding effects of dark intervals: a reply to Bourassa, Stelmach and Di Lollo 27: 1393.
Comment on reply of Wilson and Phillips: general agreement 27: 1397.

ADAPTATION, CHROMATIC
A central binocular mechanisms affects chromatic adaptation 27: 429.
Effect of surround configuration on increment thresholds of a tiny violet flash 27: 537.
Transient tritanopia of a second kind 27: 637.
Chromatic suppression of cone inputs to the luminance flicker mechanism 27: 1113.
Temporal integration in human vision and the opponent-color systems 27: 1187.
Appearance of steadily viewed lights 27: 1309.

ADAPTATION, DARK (SEE ALSO BLEACHING)
Changes in response waveform of retinal horizontal cells during dark and light adaptation 27: 143.
Light-induced changes in corneal iridescence in fish 27: 303.
The relationship of retinal sensitivity and rhodopsin in human infants 27: 697.
Intracellular potassium activities of horizontal cells and extracellular potassium activity in isolated retinae of a cyprinid fish 27: 711.
The effect of metoclopramide on the Ganzfeld electroretinogram 27: 1693.
Light and aging effects on vitamin E in the retina and retinal pigment epithelium 27: 1875.
The time-course of multiplicative and subtractive adaptation process 27: 1981.

ADAPTATION, LIGHT
Changes in response waveform of retinal horizontal cells during dark and light adaptation 27: 143.
Mesopic spectral responses and the Purkinje shift of macaque lateral geniculate nucleus cells 27: 191.
Light-dependent synaptic delay between photoreceptors and horizontal cells in the tiger salamander retina 27: 363.
The variation in the light responses of carp retinal ganglion cells in independent of response amplitude 27: 493.
Light adaptation of red cones and L1-horizontal cells in the turtle retina: effect of the background spatial pattern 27: 685.
Chronometric analysis supports fusion rather than suppression theory of binocular vision 27: 781.
Color-opponent characteristics revealed in temporal integration time 27: 1197.
Surround control of center adaptation in the receptive fields of frog retinal ganglion cells 27: 1211.
The stimulus-response functions of visual systems 27: 1253.
Light adaptation and responses to contrast flashes in cones of the walleye retina 27: 1409.
Effects of luminance on the visual acuity of strabismic and anisometropic amblyopes and optically blurred normals 27: 1543.
The effect of metoclopramide on the Ganzfeld electroretinogram 27: 1693.
Light and aging effects on vitamin E in the retina and retinal pigment epithelium 27: 1875.
The time-course of multiplicative and subtractive adaptation process 27: 1981.
The shape of the high frequency flicker sensitivity curve 27: 2119.

ADAPTATION, POST-RECEPTORAL
Higher-harmonic adaptation and the detection of squarewave gratings 27: 249.
Duration of visual afterimages on modulated backgrounds: post-receptoral processes 27: 521.
Effect of surround configuration on increment thresholds of a tiny violet flash 27: 537.
Temporal integration in human vision and the opponent-color systems 27: 1187.
Further evidence for a broadband, isotropic mechanism sensitive to high-velocity stimuli 27: 1527.
The time-course of multiplicative and subtractive adaptation process 27: 1981.

AFTEREFFECTS (SEE ALSO PERSISTENCE)
Electrophysiological correlates of positive and negative afterimages 27: 201.
Afterimage movement during saccades in the dark 27: 215.
Flicker adaptation in the peripheral retina 27: 277.
Duration of visual afterimages on modulated backgrounds: post-receptoral processes 27: 521.
Motion aftereffects associated with pursuit eye movements 27: 529.
Global factors generate the McCollough effect 27: 569.
Visual inertia in apparent motion 27: 755.
Direction-specific improvement in motion discrimination 27: 953.
Saturation of the tilt aftereffect 27: 1041.
Velocity perception and discrimination: relation to temporal mechanisms 27: 1491.
Further evidence for a broadband, isotropic mechanism sensitive to high-velocity stimuli 27: 1527.
Human binocular interaction: towards a neural model 27: 2125.
Recovery from contrast adaptation: effects of spatial and temporal frequency 27: 2185.

AFTERIMAGE (SEE AFTEREFFECTS)

ALIGNMENT (SEE HYPERCUITY)

AMACRINE CELLS
Displaced amacrine cells in the ganglion cell layer of the hamster retina 27: 1071.
Displaced small amacrine cells in the retina of the marine teleost Callionymus lyra L 27: 1431.
Serotonin containing neurons in the retina of the teleost Euqerres

plumieri 27: 2015.

AMBLYOPIA
Positional uncertainty in peripheral and amblyopic vision 27: 581.
Shape recognition in amblyopia 27: 651.
Spatial information and uncertainty in anisometropic amblyopia 27: 661.
Evidence for spatially local computations underlying discrimination of periodic patterns in fovea and periphery 27: 1343.
Effects of luminance on the visual acuity of strabismic and anisometropic amblyopes and optically blurred normals 27: 1543.

APPARATUS (SEE ALSO TECHNIQUES)
A new technical approach to monkey visual training 27: 41.
A versatile programmable pattern generator 27: 125.
A head-mounted device for measurement of pointing to visual targets without seeing the pointing arm 27: 307.
Human gaze stability in the horizontal, vertical and torsional direction during voluntary head movements, evaluated with a three-dimensional scleral induction coil technique 27: 811.
A multichannel microspectrophotometer for visual pigment investigations 27: 1047.
Presenting stereoscopic stimuli with one monitor 27: 1391.

BINOCULAR RIVALRY (SEE ALSO SUPPRESSION)
Chronometric analysis supports fusion rather than suppression theory of binocular vision 27: 781.
Perceptual "blankout" of monocular homogeneous fields (Ganzfelder) is prevented with binocular viewing 27: 967.

BINOCULAR VISION
The projection of the visual field upon the retina of the pigeon 27: 31.
The resolution of ambiguous stereoscopic matches by interpolation 27: 285.
Interpolation and the detection of fine structure in stereoscopic matching 27: 295.
A central binocular mechanisms affects chromatic adaptation 27: 429.
Rod-cone interaction in monocular but not binocular pathways 27: 479.
Chronometric analysis supports fusion rather than suppression theory of binocular vision 27: 781.
Detecting the displacements of spatial beats: a monocular capability 27: 793.
Stereoscopic contours and optokinetic nystagmus in normal and stereoblind subjects 27: 841.
Perceptual "blankout" of monocular homogeneous fields (Ganzfelder) is prevented with binocular viewing 27: 967.
Zero horizontal disparity in binocular depth mixture stimuli 27: 1207.
Depth attraction and repulsion of disparate foveal stimuli 27: 1361.
Presenting stereoscopic stimuli with one monitor 27: 1391.
What causes steroscopic tilt from spatial frequency disparity 27: 1619.
Compensatory eye movements during active head rotation for near targets: effects of imagination, rapid head oscillation and vergence 27: 1639.
Effects of movement in the background field on long-range apparent motion 27: 1679.
Detection threshold differences to crossed and uncrossed disparities 27: 1683.
Contrast sensitivity and visual acuity of the pigmented rat determined electrophysiologically 27: 1719.
Proprioceptive knowledge of eye position 27: 1737.
Human optokinetic nystagmus in response to moving binocularly disparate stimuli 27: 1807.
Contourless stimuli produce binocular brightness summation 27: 1943.
The binocular depth stereoacuity of the pigeon and its relation to the anatomical resolving power of the eye 27: 1967.
Human binocular interaction: towards a neural model 27: 2125.
Kinetic perimetry assessment of binocular visual field shape and size in young infants 27: 2163.

BIPOLAR CELLS
Physiological and morphological differences between On- and Off- center bipolar cells in the vertebrate retina 27: 135.

BLEACHING (SEE ALSO ADAPTATION, DARK)
Duration of visual afterimages on modulated backgrounds: post-receptoral processes 27: 521.

BRIGHTNESS PERCEPTION
Confounding effects of dark intervals: a reply to Bourassa, Stelmach and Di Lollo 27: 1393.
Comment on reply of Wilson and Phillips: general agreement 27: 1397.
Brightness of luminance distributions with gradual changes 27: 1589.
Implications of the Craik-O'Brien illusion for brightness perception 27: 1903.
Contourless stimuli produce binocular brightness summation 27: 1943.
Intensity coding and luxotonic activity in the ground squirrel lateral geniculate nucleus 27: 2073.

BROCA-SULZER EFFECT (SEE BRIGHTNESS PERCEPTION)

CELLS (SEE AMACRINE CELLS; BIPOLAR CELLS; GANGLION CELLS; HORIZONTAL CELLS; LATERAL GENICULATE NUCLEUS; CORTEX)

CHROMATIC ABERRATION (SEE ABERRATION)

CHROMATIC CONTRAST (SEE COLOR CONTRAST)

CHROMATIC INDUCTION (SEE COLOR CONTRAST)

CLINICAL APPLICATIONS
A versatile programmable pattern generator 27: 125.

COLOR ANOMALY
Color discrimination and neural coding in color deficients 27: 483.
Macular pigment and reduced foveal short-wavelength sensitivity in retinitis pigmentosa 27: 1077.
Early color deprivation and subsequent color vision in a dichromatic monkey 27: 2009.
Color vision polymorphism and its photopigment basis in a callitrichid monkey (Saguinus fuscicollis) 27: 2089.
Rod influence in dichromatic surface color perception 27: 2153.

COLOR APPEARANCE
Global factors generate the McCollough effect 27: 569.
Equilibrium hue judgements of dichromats 27: 983.
Bees perceive illusory colours induced by movement 27: 1285.
Appearance of steadily viewed lights 27: 1309.
Categorical color perception of Japanese observers: comparison with that of Americans 27: 1825.
Rod influence in dichromatic surface color perception 27: 2153.

COLOR BLINDNESS (SEE COLOR ANOMALY; DICHROMACY; MONOCHROMACY)

COLOR CODING
Response properties of C-type horizontal cells in the retina of the bowfin 27: 179.
Simulation of responses of spectrally-opponent neurones in the macaque lateral geniculate nucleus to chromatic and achromatic light stimuli 27: 867.
Equilibrium hue judgements of dichromats 27: 983.
Chromatic suppression of cone inputs to the luminance flicker mechanism 27: 1113.
Temporal integration in human vision and the opponent-color systems 27: 1187.
Categorical color perception of Japanese observers: comparison with that of Americans 27: 1825.
Effects of field area and configuration on chromatic and border discriminations 27: 1835.
Rod influence in dichromatic surface color perception 27: 2153.

COLOR CONTRAST
Perception of random-dot symmetry and apparent movement at and near isoluminance 27: 547.
Psychophysical determination of intraocular light scatter as a function of wavelength 27: 1291.
Effects of field area and configuration on chromatic and border discriminations 27: 1835.

COLOR DISCRIMINATION
Color discrimination and neural coding in color deficients 27: 483.

Wavelength discrimination in the turtle Pseudemys scripta elegans 27: 1501.
Researches on a unilaterally blue-blinded rhesus monkey 27: 1551.
Effects of field area and configuration on chromatic and border discriminations 27: 1835.
Early color deprivation and subsequent color vision in a dichromatic monkey 27: 2009.
Color vision polymorphism and its photopigment basis in a callitrichid monkey (Saguinus fuscicollis) 27: 2089.
Rod influence in dichromatic surface color perception 27: 2153.

COLOR MATCHING
Color discrimination and neural coding in color deficients 27: 483.
The change in color matches with retinal angle of incidence of the colorimeter beams 27: 1763.

COLOR OPPONENCY
Response properties of C-type horizontal cells in the retina of the bowfin 27: 179.
Transient tritanopia of a second kind 27: 637.
Spatial influences on colour opponent contributions to pattern detection 27: 829.
Simulation of responses of spectrally-opponent neurones in the macaque lateral geniculate nucleus to chromatic and achromatic light stimuli 27: 867.
Equilibrium hue judgements of dichromats 27: 983.
Isolation of opponent-colour mechanisms at increment threshold 27: 1017.
Chromatic suppression of cone inputs to the luminance flicker mechanism 27: 1113.
Temporal integration in human vision and the opponent-color systems 27: 1187.
Color-opponent characteristics revealed in temporal integration time 27: 1197.
Appearance of steadily viewed lights 27: 1309.

COLOR SELECTIVITY
The distinction by light and electron microscopy of two types of cone containing colorless oil droplets in the retina of the turtle 27: 1445.
Ultraviolet receptors, tetrachromatic colour vision and retinal mosaics in the brown trout (Salmo trutta): age-dependent changes 27: 2101.

CONES
The ultrastructure of cones in the walleye retina 27: 327.
Rod-cone interaction in monocular but not binocular pathways 27: 479.
Light adaptation of red cones and L1-horizontal cells in the turtle retina: effect of the background spatial pattern 27: 685.
Rod and cone system contributions to oscillatory potentials: an explanation for the conditioning flash effect 27: 859.
Interactions between the rod and the cone pathways in the cat retina 27: 1093.
Dependence of cone b-wave implicit time on rod amplitude in retinitis pigmentosa 27: 1105.
On the spatial mismatch of rod and cone mediated inputs to cat retinal ganglion cells 27: 1223.
Two types of lamprey retina photoreceptors immunoreactive to rod- or cone-specific antibodies 27: 1237.
Visual pigment polymorphism in the guppy Poecilia reticulata 27: 1243.
Polymorphism of the middle wavelength cone in two species of South American monkey: Cebus apella and Callicebus moloch 27: 1263.
Light adaptation and responses to contrast flashes in cones of the walleye retina 27: 1409.
Effects of IBMX on the ERG of the isolated perfused cat eye 27: 1421.
The distinction by light and electron microscopy of two types of cone containing colorless oil droplets in the retina of the turtle 27: 1445.
Wavelength discrimination in the turtle Pseudemys scripta elegans 27: 1501.
Accumulation of (*g-aminobutyric acid by horizontal cells isolated from the goldfish retina 27: 2027.
Ultraviolet receptors, tetrachromatic colour vision and retinal mosaics in the brown trout (Salmo trutta): age-dependent changes 27: 2101.

CONTOUR PERCEPTION
Illusory contour orientation discrimination 27: 453.

Global factors generate the McCollough effect 27: 569.
Brightness of luminance distributions with gradual changes 27: 1589.
The detection of deviation from straightness in lines 27: 1659.
Effects of field area and configuration on chromatic and border discriminations 27: 1835.
Contourless stimuli produce binocular brightness summation 27: 1943.

CONTRAST DISCRIMINATION
On the relation between summation and facilitation 27: 119.
Evidence for spatially local computations underlying discrimination of periodic patterns in fovea and periphery 27: 1343.

CONTRAST FLASH (SEE MASKING)

CONTRAST PERCEPTION
Simple reaction time to sinusoidal grating and perceptual integration time: contributions of perceptual and response processes 27: 269.
Temporal properties of spatial contrast vision 27: 765.
Effect of pattern luminance profile on the pattern ERG in man and pigeon 27: 883.
Implications of the Craik-O'Brien illusion for brightness perception 27: 1903.

CONTRAST REVERSAL
Principal components analysis for source localization of VEPs in man 27: 165.

CONTRAST SENSITIVITY
Temporal properties of spatial contrast vision 27: 765.
Visual resolution and sensitivity in a nocturnal primate (Galago) measured with visual evoked potentials 27: 845.
Psychophysics of reading--V. The role of contrast in normal vision 27: 1165.
The effects of optical degradation on the contrast sensitivity function measured at the fovea and in the periphery 27: 1179.
Evidence for spatially local computations underlying discrimination of periodic patterns in fovea and periphery 27: 1343.
Contrast sensitivity and visual acuity of the pigmented rat determined electrophysiologically 27: 1719.
Do Y geniculate neurons have greater contrast sensitivity than X geniculate neurons at all visual field locations? 27: 1733.
The physical limits of grating visibility 27: 1915.
Nonlinearity in human visual responses to two-dimensional patterns, and a limitation of fourier methods 27: 2181.

CORNEA
Changes in corneal curvature during accommodation in chicks 27: 241.
Light-induced changes in corneal iridescence in fish 27: 303.
Developmental aspects of experimental myopia in chicks: susceptibility, recovery and relation to emmetropization 27: 1139.

CORTEX
Principal components analysis for source localization of VEPs in man 27: 165.
The responses of neurons in the cortex in the superior temporal sulcus of the monkey to band-pass spatial frequency filtered faces 27: 311.
Visual receptive field properties in the posterior suprasylvian cortex of the cat: a comparison between the areas PMLS and PLLS 27: 343.
The duplex character of the corticofugal pathway from the striate cortex to the lateral geniculate complex of the cat 27: 723.
Visual resolution and sensitivity in a nocturnal primate (Galago) measured with visual evoked potentials 27: 845.
The topography of scalp potentials evoked by pattern pulse stimuli 27: 901.
The localization of cortical activity evoked by vernier offset 27: 1387.
Response suppression by extending sine-wave gratings within the receptive fields of neurons in visual cortical area V3A of the macaque monkey 27: 1687.
Representation of edges of variable blur by neuroanal responses in the lateral geniculate body and the visual cortex of cats: limits of linear prediction 27: 1701.
Coding of visual stimulus velocity in area mt of the macaque 27: 2035.
Studying striate cortex neurons in behaving monkeys: benefits of image

stabilization 27: 2081.

CRAIK-O'BRIEN EFFECT (SEE CONTOUR PERCEPTION)

DEPTH PERCEPTION
The resolution of ambiguous stereoscopic matches by interpolation 27: 285.
Interpolation and the detection of fine structure in stereoscopic matching 27: 295.
Zero horizontal disparity in binocular depth mixture stimuli 27: 1207.
Depth attraction and repulsion of disparate foveal stimuli 27: 1361.

DETECTION THRESHOLD
On the relation between summation and facilitation 27: 119.
Higher-harmonic adaptation and the detection of squarewave gratings 27: 249.
Facilitation and masking of briefly presented gratings: time-course and contrast dependence 27: 369.
Scale invariant features of differential spatial displacement discrimination 27: 441.
The role of eye movements in motion detection 27: 747.
Changes in visual sensitivity with age in rats with heredity retinal degeneration 27: 915.
Statistical efficiency for the detection of visual noise 27: 1029.
Evidence for spatially local computations underlying discrimination of periodic patterns in fovea and periphery 27: 1343.
Confounding effects of dark intervals: a reply to Bourassa, Stelmach and Di Lollo 27: 1393.
Comment on reply of Wilson and Phillips: general agreement 27: 1397.
Further evidence for a broadband, isotropic mechanism sensitive to high-velocity stimuli 27: 1527.
The dependence of edge displacement thresholds on edge blur, contrast, and displacement distance 27: 1631.
The detection of deviation from straightness in lines 27: 1659.
Detection threshold differences to crossed and uncrossed disparities 27: 1683.
Direction specific masking and the analysis of motion in two dimensions 27: 1783.
Implications of the Craik-O'Brien illusion for brightness perception 27: 1903.
Summation of very close spatial frequencies: the importance of spatial probability summation 27: 1997.
Human binocular interaction: towards a neural model 27: 2125.
Recovery from contrast adaptation: effects of spatial and temporal frequency 27: 2185.
Vision beyond the resolution limit: aliasing in the periphery 27: 2193.

DEUTERANOPIA (SEE DICHROMACY)

DEVELOPMENT
Constant dendritic coverage by ganglion cells with growth of the goldfish's retina 27: 17.
Vernier acuity is less than grating acuity in 2- and 3-month-olds 27: 77.
Development of the area centralis and visual streak in the grey kangaroo Macropus fuliginosus 27: 151.
Aging and human macular pigment density. Appended with translations from the work of Max Schultze and Ewald Hering 27: 257.
Isolation of short-wavelength-sensitive cone photoreceptors in 4-6-week-old human infants 27: 469.
Pupillometric measures of retinal sensitivity in infants and adults with retinitis pigmentosa 27: 499.
The relationship of retinal sensitivity and rhodopsin in human infants 27: 697.
Developmental aspects of experimental myopia in chicks: susceptibility, recovery and relation to emmetropization 27: 1139.
Yellowing of the human lens: nuclear and cortical contributions 27: 1581.
Experimentally induced myopia does not affect post-hatching development of the chick lens 27: 1779.
Visual acuity of human infants at scotopic, mesopic and photopic luminances 27: 1845.
Early color deprivation and subsequent color vision in a dichromatic monkey 27: 2009.
Accommodation in infants as measured by photorefraction 27: 2141.
Kinetic perimetry assessment of binocular visual field shape and size in

young infants 27: 2163.
Children's and adults' predictive saccades to square-wave targets 27: 2177.

DICHROMACY
Equilibrium hue judgements of dichromats 27: 983.
Researches on a unilaterally blue-blinded rhesus monkey 27: 1551.
Rod influence in dichromatic surface color perception 27: 2153.

DIPLOPIA (SEE BINOCULAR VISION)

DIRECTIONAL SELECTIVITY
Errors in direction-of-motion discrimination with complex stimuli 27: 61.
Motion capture anisotropy 27: 97.
Effect of monocular light exclusion on the Stiles-Crawford function 27: 507.
Receptive field size of human motion detection units 27: 621.
Moving contexts do affect the perceived direction of apparent motion in motion competition displays 27: 799.
Direction-specific improvement in motion discrimination 27: 953.
Further evidence for a broadband, isotropic mechanism sensitive to high-velocity stimuli 27: 1527.
The change in color matches with retinal angle of incidence of the colorimeter beams 27: 1763.
Discrimination of differences in speed and flicker rate depends on directionally selective mechanisms 27: 1881.
Coding of visual stimulus velocity in area mt of the macaque 27: 2035.

DISPARITY (SEE BINOCULAR VISION; STEREOPSIS)

ECCENTRICITY (SEE PERIPHERAL VISION)

ELECTRORETINOGRAM
Mechanisms of azide induced increases in the c-wave and standing potential of the intact cat eye 27: 1.
Electrophysiological correlates of rod outer segment disc shedding in rabbit retina 27: 357.
Pupillometric measures of retinal sensitivity in infants and adults with retinitis pigmentosa 27: 499.
The relationship of retinal sensitivity and rhodopsin in human infants 27: 697.
Rod and cone system contributions to oscillatory potentials: an explanation for the conditioning flash effect 27: 859.
Effect of pattern luminance profile on the pattern ERG in man and pigeon 27: 883.
Dependence of cone b-wave implicit time on rod amplitude in retinitis pigmentosa 27: 1105.
Polymorphism of the middle wavelength cone in two species of South American monkey: Cebus apella and Callicebus moloch 27: 1263.
Effects of IBMX on the ERG of the isolated perfused cat eye 27: 1421.
The effect of metoclopramide on the Ganzfeld electroretinogram 27: 1693.
Color vision polymorphism and its photopigment basis in a callitrichid monkey (Saguinus fuscicollis) 27: 2089.

ENTOPTIC PHENOMENA
Psychophysical determination of intraocular light scatter as a function of wavelength 27: 1291.

EVOKED POTENTIALS
Principal components analysis for source localization of VEPs in man 27: 165.
Electrophysiological correlates of positive and negative afterimages 27: 201.
Isolation of short-wavelength-sensitive cone photoreceptors in 4-6-week-old human infants 27: 469.
Influence of saccades on manual reactions--a reaction time and VEP study 27: 609.
The effect of grating spatial frequency on the early VEP-component CI 27: 727.
Visual resolution and sensitivity in a nocturnal primate (Galago) measured with visual evoked potentials 27: 845.
The topography of scalp potentials evoked by pattern pulse stimuli 27: 901.

The localization of cortical activity evoked by vernier offset 27: 1387.
Contrast sensitivity and visual acuity of the pigmented rat determined electrophysiologically 27: 1719.
Visual persistence of stereoscopic stimuli: electric brain activity without perceptual correlate 27: 2109.
Nonlinearity in human visual responses to two-dimensional patterns, and a limitation of fourier methods 27: 2181.

EYE-MOVEMENTS
A new technical approach to monkey visual training 27: 41.
Extraocular muscle sideslip and orbital geometry in monkeys 27: 381.
Effects of light and dark environments on macaque and human fixational eye movements 27: 401.
Description of the length-tension curves of the extraocular muscles 27: 491.
Predictive eye saccades are different from visually triggered saccades 27: 517.
Global factors generate the McCollough effect 27: 569.
The role of eye movements in motion detection 27: 747.
Human gaze stability in the horizontal, vertical and torsional direction during voluntary head movements, evaluated with a three-dimensional scleral induction coil technique 27: 811.
A direct test of Listing's law--I. Human ocular torsion measured in static tertiary positions 27: 929.
A direct test of Listing's law--II. Human ocular torsion measured under dynamic conditions 27: 939.
Sensitivity of smooth eye movement to small differences in target velocity 27: 993.
Adaptive changes in post-saccadic drift induced by patching one eye 27: 1299.
Shared attentional control of smooth eye movement and perception 27: 1603.
Proprioceptive knowledge of eye position 27: 1737.
Human optokinetic nystagmus in response to moving binocularly disparate stimuli 27: 1807.
The amplitude and angle of saccades to double-step target displacements 27: 1925.
Studying striate cortex neurons in behaving monkeys: benefits of image stabilization 27: 2081.
Children's and adults' predictive saccades to square-wave targets 27: 2177.

EYE-MOVEMENTS, OPTOKINETIC NYSTAGMUS
Stereoscopic contours and optokinetic nystagmus in normal and stereoblind subjects 27: 841.
Human optokinetic nystagmus in response to moving binocularly disparate stimuli 27: 1807.

EYE-MOVEMENTS, SACCADIC
Reading twisted text: implications for the role of saccades 27: 45.
Afterimage movement during saccades in the dark 27: 215.
Reducing the influence of non-target stimuli on saccade accuracy: predictability and latency effects 27: 227.
Oculomotor and skeletal motor systems share one map of visual space 27: 393.
Effects of light and dark environments on macaque and human fixational eye movements 27: 401.
Predictive eye saccades are different from visually triggered saccades 27: 517.
On plotting amplitude-transition functions for voluntary eye saccades 27: 675.
Skewness of saccadic velocity profiles: a unifying parameter for normal and slow saccades 27: 731.
A direct test of Listing's law--II. Human ocular torsion measured under dynamic conditions 27: 939.
Adaptive changes in post-saccadic drift induced by patching one eye 27: 1299.
Planning sequences of saccades 27: 1327.
Smooth eye movements with step-ramp stimuli: the influence of attention and stimulus extent 27: 1565.
A parametric analysis of human saccades in different experimental paradigms 27: 1745.
The amplitude and angle of saccades to double-step target displacements 27: 1925.

On localization and saccade programming 27: 1953.
Children's and adults' predictive saccades to square-wave targets 27: 2177.

EYE-MOVEMENTS, SMOOTH PURSUIT
Motion aftereffects associated with pursuit eye movements 27: 529.
Sensitivity of smooth eye movement to small differences in target velocity 27: 993.
Smooth eye movements with step-ramp stimuli: the influence of attention and stimulus extent 27: 1565.
Shared attentional control of smooth eye movement and perception 27: 1603.

EYE-MOVEMENTS, TORSIONAL
Description of the length-tension curves of the extraocular muscles 27: 491.
Human gaze stability in the horizontal, vertical and torsional direction during voluntary head movements, evaluated with a three-dimensional scleral induction coil technique 27: 811.
A direct test of Listing's law--I. Human ocular torsion measured in static tertiary positions 27: 929.
A direct test of Listing's law--II. Human ocular torsion measured under dynamic conditions 27: 939.

EYE-MOVEMENTS, VERGENCE
Perspective vergence: oculomotor responses to line drawings 27: 1513.
Compensatory eye movements during active head rotation for near targets: effects of imagination, rapid head oscillation and vergence 27: 1639.
The effects of optical vergence, contrast, and luminance on the accommodative response to spatially bandpass filtered targets 27: 1797.

EYE-MOVEMENTS, VESTIBULO-OCULAR
Compensatory eye movements during active head rotation for near targets: effects of imagination, rapid head oscillation and vergence 27: 1639.

FLICKER
Principal components analysis for source localization of VEPs in man 27: 165.
Flicker adaptation in the peripheral retina 27: 277.
The shape of the high frequency flicker sensitivity curve 27: 2119.

FORM PERCEPTION
Spatial frequency filtering and target identification 27: 87.

FOVEA
The effects of optical degradation on the contrast sensitivity function measured at the fovea and in the periphery 27: 1179.
Evidence for spatially local computations underlying discrimination of periodic patterns in fovea and periphery 27: 1343.

GANGLION CELLS
A whole mount method for sequential analysis of photoreceptor and ganglion cell topography in a single retina 27: 9.
Constant dendritic coverage by ganglion cells with growth of the goldfish's retina 27: 17.
The projection of the visual field upon the retina of the pigeon 27: 31.
Development of the area centralis and visual streak in the grey kangaroo Macropus fuliginosus 27: 151.
The variation in the light responses of carp retinal ganglion cells in independent of response amplitude 27: 493.
An unusual optic fiber pattern in the retina of the primitive fish Pantodon buchholzi, Peters 27: 511.
Displaced amacrine cells in the ganglion cell layer of the hamster retina 27: 1071.
Interactions between the rod and the cone pathways in the cat retina 27: 1093.
Surround control of center adaptation in the receptive fields of frog retinal ganglion cells 27: 1211.
On the spatial mismatch of rod and cone mediated inputs to cat retinal ganglion cells 27: 1223.
Displaced retinal ganglion cells in the wallaby Setonix brachyurus 27: 1269.
Visual latency of ganglion X- and Y-cells: a comparison with geniculate X- and Y-cells 27: 1399.

An electron microscopic and analysis of the optic nerve of the eastern chipmunk (Tamias sibiricus asiaticus): total fiber count and retinotopic organisation 27: 1891.
Physiological effects of muscarinic vs nicotinic ACh antagonists upon ganglion cell activity in the frog retina 27: 2061.

GRATINGS
Errors in direction-of-motion discrimination with complex stimuli 27: 61.
Electrophysiological correlates of positive and negative afterimages 27: 201.
Simple reaction time to sinusoidal grating and perceptual integration time: contributions of perceptual and response processes 27: 269.
Facilitation and masking of briefly presented gratings: time-course and contrast dependence 27: 369.
Receptive field size of human motion detection units 27: 621.
A retinal smear technique for varying grating contrast 27: 681.
The effect of grating spatial frequency on the early VEP-component CI 27: 727.
Detecting the displacements of spatial beats: a monocular capability 27: 793.
The effects of optical degradation on the contrast sensitivity function measured at the fovea and in the periphery 27: 1179.
Perceptual latency and spatial frequency 27: 1279.
Is pattern masking predicted by the cross-correlation between signal and mask? 27: 1319.
The effect of orientation and motion of enclosed texture on induced movement 27: 1369.
Distortion products in geniculate X-cells: a physiological basis for masking by spatially modulated gratings? 27: 1377.
Effects of contrast and spatial frequency on vernier acuity 27: 1817.
Discrimination of differences in speed and flicker rate depends on directionally selective mechanisms 27: 1881.
The physical limits of grating visibility 27: 1915.
Summation of very close spatial frequencies: the importance of spatial probability summation 27: 1997.
Recovery from contrast adaptation: effects of spatial and temporal frequency 27: 2185.

HAIDINGER'S BRUSHES (SEE ENTOPTIC PHENOMENA)

HORIZONTAL CELLS
Changes in response waveform of retinal horizontal cells during dark and light adaptation 27: 143.
Response properties of C-type horizontal cells in the retina of the bowfin 27: 179.
Excitatory amino acids have different effects on horizontal cells in eyecup and isolated retina 27: 209.
Light-dependent synaptic delay between photoreceptors and horizontal cells in the tiger salamander retina 27: 363.
Intracellular potassium activities of horizontal cells and extracellular potassium activity in isolated retinae of a cyprinid fish 27: 711.
Micro-electrode measurements and functional aspects of chloride activity in cyprinid fish retina: extracellular activity and intracellular activities of L- and C-type horizontal cells 27: 1481.
Accumulation of (*g-aminobutyric acid by horizontal cells isolated from the goldfish retina 27: 2027.

HYPERACUITY
Vernier acuity is less than grating acuity in 2- and 3-month-olds 27: 77.
Opponent model for line interval discrimination: interval and vernier performance compared 27: 107.
Position and spatial frequency in large-scale localization judgments 27: 417.
Scale invariant features of differential spatial displacement discrimination 27: 441.
Positional uncertainty in peripheral and amblyopic vision 27: 581.
Spatial information and uncertainty in anisometropic amblyopia 27: 661.
The localization of cortical activity evoked by vernier offset 27: 1387.
Effects of contrast and spatial frequency on vernier acuity 27: 1817.
The binocular depth stereoacuity of the pigeon and its relation to the anatomical resolving power of the eye 27: 1967.

ILLUSION (SEE ALSO AFTEREFFECTS)

Illusory contour orientation discrimination 27: 453.
Bees perceive illusory colours induced by movement 27: 1285.

IMAGE QUALITY
Vision beyond the resolution limit: aliasing in the periphery 27: 2193.

IMMUNOCHEMISTRY
Double-label analysis of GAD- and GABA-like immunoreactivity in the rabbit retina 27: 23.
Two types of lamprey retina photoreceptors immunoreactive to rod- or cone-specific antibodies 27: 1237.
Serotonin containing neurons in the retina of the teleost Euqerres plumieri 27: 2015.
Interstitial retinol-binding protein and cellular retinal-binding protein in the mammalian pineal 27: 2049.

INCREMENT THRESHOLD
Effect of surround configuration on increment thresholds of a tiny violet flash 27: 537.
Transient tritanopia of a second kind 27: 637.
On and Off systems in human vision 27: 919.
Isolation of opponent-colour mechanisms at increment threshold 27: 1017.
Temporal integration in human vision and the opponent-color systems 27: 1187.
Color-opponent characteristics revealed in temporal integration time 27: 1197.
The stimulus-response functions of visual systems 27: 1253.
Researches on a unilaterally blue-blinded rhesus monkey 27: 1551.
The time-course of multiplicative and subtractive adaptation process 27: 1981.

INTEROCULAR TRANSFER (SEE AFTEREFFECTS)

IRIS
Double-label analysis of GAD- and GABA-like immunoreactivity in the rabbit retina 27: 23.
Two types of lamprey retina photoreceptors immunoreactive to rod- or cone-specific antibodies 27: 1237.
Serotonin containing neurons in the retina of the teleost Euqerres plumieri 27: 2015.
Interstitial retinol-binding protein and cellular retinal-binding protein in the mammalian pineal 27: 2049.

LATENCY
Reducing the influence of non-target stimuli on saccade accuracy: predictability and latency effects 27: 227.
Influence of saccades on manual reactions--a reaction time and VEP study 27: 609.
On plotting amplitude-transition functions for voluntary eye saccades 27: 675.
The duplex character of the corticofugal pathway from the striate cortex to the lateral geniculate complex of the cat 27: 723.
The topography of scalp potentials evoked by pattern pulse stimuli 27: 901.
Perceptual latency and spatial frequency 27: 1279.
On localization and saccade programming 27: 1953.

LATERAL GENICULATE NUCLEUS
Mesopic spectral responses and the Purkinje shift of macaque lateral geniculate nucleus cells 27: 191.
The duplex character of the corticofugal pathway from the striate cortex to the lateral geniculate complex of the cat 27: 723.
Simulation of responses of spectrally-opponent neurones in the macaque lateral geniculate nucleus to chromatic and achromatic light stimuli 27: 867.
Distortion products in geniculate X-cells: a physiological basis for masking by spatially modulated gratings? 27: 1377.
Visual latency of ganglion X- and Y-cells: a comparison with geniculate X- and Y-cells 27: 1399.
Representation of edges of variable blur by neuroanal responses in the lateral geniculate body and the visual cortex of cats: limits of linear prediction 27: 1701.
Do Y geniculate neurons have greater contrast sensitivity than X

geniculate neurons at all visual field locations? 27: 1733.
Intensity coding and luxotonic activity in the ground squirrel lateral geniculate nucleus 27: 2073.

LATERAL INHIBITION
Planning sequences of saccades 27: 1327.
Visual latency of ganglion X- and Y-cells: a comparison with geniculate X- and Y-cells 27: 1399.
Smooth eye movements with step-ramp stimuli: the influence of attention and stimulus extent 27: 1565.
Children's and adults' predictive saccades to square-wave targets 27: 2177.
Recovery from contrast adaptation: effects of spatial and temporal frequency 27: 2185.

LENS
Developmental aspects of experimental myopia in chicks: susceptibility, recovery and relation to emmetropization 27: 1139.
The refractive increments of bovine (*a-, (*b- and (*g-crystallins 27: 1539.
Yellowing of the human lens: nuclear and cortical contributions 27: 1581.
Experimentally induced myopia does not affect post-hatching development of the chick lens 27: 1779.

LOW VISION
Psychophysics of reading--V. The role of contrast in normal vision 27: 1165.

LUMINANCE
Chromatic suppression of cone inputs to the luminance flicker mechanism 27: 1113.
Color-opponent characteristics revealed in temporal integration time 27: 1197.
Appearance of steadily viewed lights 27: 1309.
Effects of luminance on the visual acuity of strabismic and anisometropic amblyopes and optically blurred normals 27: 1543.
The effects of optical vergence, contrast, and luminance on the accommodative response to spatially bandpass filtered targets 27: 1797.
Intensity coding and luxotonic activity in the ground squirrel lateral geniculate nucleus 27: 2073.
The shape of the high frequency flicker sensitivity curve 27: 2119.

MACH BANDS (SEE CONTOUR PERCEPTION)

MACULAR PIGMENT
Aging and human macular pigment density. Appended with translations from the work of Max Schultze and Ewald Hering 27: 257.
Optical density of human macular pigment 27: 705.
Macular pigment and reduced foveal short-wavelength sensitivity in retinitis pigmentosa 27: 1077.

MASKING
Facilitation and masking of briefly presented gratings: time-course and contrast dependence 27: 369.
On and Off systems in human vision 27: 919.
Is pattern masking predicted by the cross-correlation between signal and mask? 27: 1319.
Distortion products in geniculate X-cells: a physiological basis for masking by spatially modulated gratings? 27: 1377.
Further evidence for a broadband, isotropic mechanism sensitive to high-velocity stimuli 27: 1527.
Direction specific masking and the analysis of motion in two dimensions 27: 1783.

MCCOLLOUGH EFFECT (SEE AFTEREFFECTS)

METACONTRAST (SEE MASKING)

MONOCHROMACY
Rod and cone system contributions to oscillatory potentials: an explanation for the conditioning flash effect 27: 859.

MONOCULAR VISION

Detecting the displacements of spatial beats: a monocular capability 27: 793.
Perceptual "blankout" of monocular homogeneous fields (Ganzfelder) is prevented with binocular viewing 27: 967.
Adaptive changes in post-saccadic drift induced by patching one eye 27: 1299.
Perspective vergence: oculomotor responses to line drawings 27: 1513.
Compensatory eye movements during active head rotation for near targets: effects of imagination, rapid head oscillation and vergence 27: 1639.
Contrast sensitivity and visual acuity of the pigmented rat determined electrophysiologically 27: 1719.
Human binocular interaction: towards a neural model 27: 2125.

MORPHOLOGY (SEE NEUROANATOMY)

MOVEMENT PERCEPTION
Errors in direction-of-motion discrimination with complex stimuli 27: 61.
Motion capture anisotropy 27: 97.
Principal components analysis for source localization of VEPs in man 27: 165.
Motion aftereffects associated with pursuit eye movements 27: 529.
Perception of random-dot symmetry and apparent movement at and near isoluminance 27: 547.
Receptive field size of human motion detection units 27: 621.
The role of eye movements in motion detection 27: 747.
Visual inertia in apparent motion 27: 755.
Moving contexts do affect the perceived direction of apparent motion in motion competition displays 27: 799.
Direction-specific improvement in motion discrimination 27: 953.
Sensitivity of smooth eye movement to small differences in target velocity 27: 993.
Bees perceive illusory colours induced by movement 27: 1285.
The effect of orientation and motion of enclosed texture on induced movement 27: 1369.
Velocity perception and discrimination: relation to temporal mechanisms 27: 1491.
Further evidence for a broadband, isotropic mechanism sensitive to high-velocity stimuli 27: 1527.
The dependence of edge displacement thresholds on edge blur, contrast, and displacement distance 27: 1631.
Effects of movement in the background field on long-range apparent motion 27: 1679.
Direction specific masking and the analysis of motion in two dimensions 27: 1783.
Discrimination of differences in speed and flicker rate depends on directionally selective mechanisms 27: 1881.
Coding of visual stimulus velocity in area mt of the macaque 27: 2035.

NEUROANATOMY
A whole mount method for sequential analysis of photoreceptor and ganglion cell topography in a single retina 27: 9.
Constant dendritic coverage by ganglion cells with growth of the goldfish's retina 27: 17.
Double-label analysis of GAD- and GABA-like immunoreactivity in the rabbit retina 27: 23.
Physiological and morphological differences between On- and Off- center bipolar cells in the vertebrate retina 27: 135.
Development of the area centralis and visual streak in the grey kangaroo Macropus fuliginosus 27: 151.
The ultrastructure of cones in the walleye retina 27: 327.
Visual receptive field properties in the posterior suprasylvian cortex of the cat: a comparison between the areas PMLS and PLLS 27: 343.
An unusual optic fiber pattern in the retina of the primitive fish Pantodon buchholzi, Peters 27: 511.
Displaced amacrine cells in the ganglion cell layer of the hamster retina 27: 1071.
Displaced retinal ganglion cells in the wallaby Setonix brachyurus 27: 1269.
Displaced small amacrine cells in the retina of the marine teleost Callionymus lyra L 27: 1431.
The distinction by light and electron microscopy of two types of cone containing colorless oil droplets in the retina of the turtle 27: 1445.
Spatial visual acuity of the falcon, Falco berigora: a behavioural,

optical and anatomical investigation 27: 1859.
An electron microscopic and analysis of the optic nerve of the eastern chipmunk (Tamias sibiricus asiaticus): total fiber count and retinotopic organisation 27: 1891.

NEUROCHEMISTRY
Double-label analysis of GAD- and GABA-like immunoreactivity in the rabbit retina 27: 23.
Physiological and morphological differences between On- and Off- center bipolar cells in the vertebrate retina 27: 135.
Excitatory amino acids have different effects on horizontal cells in eyecup and isolated retina 27: 209.
Intracellular potassium activities of horizontal cells and extracellular potassium activity in isolated retinae of a cyprinid fish 27: 711.
An antioxidative role of ocular screening pigments 27: 893.
Isolation and characterization of a retinal-binding protein from the squid retina 27: 1057.
Two types of lamprey retina photoreceptors immunoreactive to rod- or cone-specific antibodies 27: 1237.
Effects of IBMX on the ERG of the isolated perfused cat eye 27: 1421.
Micro-electrode measurements and functional aspects of chloride activity in cyprinid fish retina: extracellular activity and intracellular activities of L- and C-type horizontal cells 27: 1481.
Light and aging effects on vitamin E in the retina and retinal pigment epithelium 27: 1875.
Serotonin containing neurons in the retina of the teleost Eugerres plumieri 27: 2015.
Accumulation of (*g-aminobutyric acid by horizontal cells isolated from the goldfish retina 27: 2027.
Interstitial retinol-binding protein and cellular retinal-binding protein in the mammalian pineal 27: 2049.
Physiological effects of muscarinic vs nicotinic ACh antagonists upon ganglion cell activity in the frog retina 27: 2061.

NEUROTRANSMITTER (SEE NEUROCHEMISTRY)

NOISE
The variation in the light responses of carp retinal ganglion cells in independent of response amplitude 27: 493.
Spatial information and uncertainty in anisometropic amblyopia 27: 661.
Statistical efficiency for the detection of visual noise 27: 1029.

OBITUARY
Yves Le Grand 1908-1986 27: 133.

OCULAR DIMENSIONS
The projection of the visual field upon the retina of the pigeon 27: 31.
Extraocular muscle sideslip and orbital geometry in monkeys 27: 381.
The optics of comparative ophthalmoscopy 27: 599.
Retinal magnification factor at the ora terminalis: a structural study of human and animal eyes 27: 1229.
Yellowing of the human lens: nuclear and cortical contributions 27: 1581.
Experimentally induced myopia does not affect post-hatching development of the chick lens 27: 1779.
Spatial visual acuity of the falcon, Falco berigora: a behavioural, optical and anatomical investigation 27: 1859.

ORIENTATION PERCEPTION
The effect of orientation and motion of enclosed texture on induced movement 27: 1369.
Further evidence for a broadband, isotropic mechanism sensitive to high-velocity stimuli 27: 1527.
Nonlinearity in human visual responses to two-dimensional patterns, and a limitation of fourier methods 27: 2181.

PATHOLOGY
Pupillometric measures of retinal sensitivity in infants and adults with retinitis pigmentosa 27: 499.
Changes in visual sensitivity with age in rats with heredity retinal degeneration 27: 915.
Macular pigment and reduced foveal short-wavelength sensitivity in retinitis pigmentosa 27: 1077.
Dependence of cone b-wave implicit time on rod amplitude in retinitis

pigmentosa 27: 1105.
Effects of IBMX on the ERG of the isolated perfused cat eye 27: 1421.

PERIPHERAL VISION
Flicker adaptation in the peripheral retina 27: 277.
Positional uncertainty in peripheral and amblyopic vision 27: 581.
The effects of optical degradation on the contrast sensitivity function measured at the fovea and in the periphery 27: 1179.
Evidence for spatially local computations underlying discrimination of periodic patterns in fovea and periphery 27: 1343.
Do Y geniculate neurons have greater contrast sensitivity than X geniculate neurons at all visual field locations? 27: 1733.
Visual acuity of human infants at scotopic, mesopic and photopic luminances 27: 1845.
Summation of very close spatial frequencies: the importance of spatial probability summation 27: 1997.
Kinetic perimetry assessment of binocular visual field shape and size in young infants 27: 2163.
Vision beyond the resolution limit: aliasing in the periphery 27: 2193.

PERSISTENCE (SEE ALSO AFTEREFFECTS)
Global factors generate the McCollough effect 27: 569.
Visual persistence of stereoscopic stimuli: electric brain activity without perceptual correlate 27: 2109.

PHOTOCHEMISTRY
Isolation and characterization of a retinal-binding protein from the squid retina 27: 1057.
Factors affecting the regeneration of rhodopsin in the isolated amphibian retina 27: 1085.
Interstitial retinol-binding protein and cellular retinal-binding protein in the mammalian pineal 27: 2049.

PHOTOPIC VISION
Visual acuity of human infants at scotopic, mesopic and photopic luminances 27: 1845.
The time-course of multiplicative and subtractive adaptation process 27: 1981.

PHOTOPIGMENTS
The relationship of retinal sensitivity and rhodopsin in human infants 27: 697.
A multichannel microspectrophotometer for visual pigment investigations 27: 1047.
Visual pigment polymorphism in the guppy Poecilia reticulata 27: 1243.
Wavelength discrimination in the turtle Pseudemys scripta elegans 27: 1501.
Color vision polymorphism and its photopigment basis in a callitrichid monkey (Saguinus fuscicollis) 27: 2089.
Ultraviolet receptors, tetrachromatic colour vision and retinal mosaics in the brown trout (Salmo trutta): age-dependent changes 27: 2101.

PHOTORECEPTORS (SEE ALSO CONES; RODS)
A whole mount method for sequential analysis of photoreceptor and ganglion cell topography in a single retina 27: 9.
Electrophysiological correlates of rod outer segment disc shedding in rabbit retina 27: 357.
Light-dependent synaptic delay between photoreceptors and horizontal cells in the tiger salamander retina 27: 363.
Effect of monocular light exclusion on the Stiles-Crawford function 27: 507.
Factors affecting the regeneration of rhodopsin in the isolated amphibian retina 27: 1085.
Two types of lamprey retina photoreceptors immunoreactive to rod- or cone-specific antibodies 27: 1237.
Visual pigment polymorphism in the guppy Poecilia reticulata 27: 1243.
The stimulus-response functions of visual systems 27: 1253.
Polymorphism of the middle wavelength cone in two species of South American monkey: Cebus apella and Callicebus moloch 27: 1263.
Effects of IBMX on the ERG of the isolated perfused cat eye 27: 1421.
Wavelength discrimination in the turtle Pseudemys scripta elegans 27: 1501.
The change in color matches with retinal angle of incidence of the

colorimeter beams 27: 1763.
Spatial visual acuity of the falcon, Falco berigora: a behavioural, optical and anatomical investigation 27: 1859.
The physical limits of grating visibility 27: 1915.

PI MECHANISMS
Transient tritanopia of a second kind 27: 637.

PIGMENT EPITHELIUM
Mechanisms of azide induced increases in the c-wave and standing potential of the intact cat eye 27: 1.
An antioxidative role of ocular screening pigments 27: 893.
Light and aging effects on vitamin E in the retina and retinal pigment epithelium 27: 1875.

PROTANOPIA (SEE DICHROMACY)

PUPILS
Pupillometric measures of retinal sensitivity in infants and adults with retinitis pigmentosa 27: 499.
The relationship of retinal sensitivity and rhodopsin in human infants 27: 697.
Perspective vergence: oculomotor responses to line drawings 27: 1513.

READING
Reading twisted text: implications for the role of saccades 27: 45.
Psychophysics of reading--V. The role of contrast in normal vision 27: 1165.
On localization and saccade programming 27: 1953.

RECEPTIVE FIELDS (SEE ALSO INDIVIDUAL CELL TYPES)
Physiological and morphological differences between On- and Off- center bipolar cells in the vertebrate retina 27: 135.
Visual receptive field properties in the posterior suprasylvian cortex of the cat: a comparison between the areas PMLS and PLLS 27: 343.
Receptive field size of human motion detection units 27: 621.
The duplex character of the corticofugal pathway from the striate cortex to the lateral geniculate complex of the cat 27: 723.
Surround control of center adaptation in the receptive fields of frog retinal ganglion cells 27: 1211.
On the spatial mismatch of rod and cone mediated inputs to cat retinal ganglion cells 27: 1223.
Response suppression by extending sine-wave gratings within the receptive fields of neurons in visual cortical area V3A of the macaque monkey 27: 1687.
Physiological effects of muscarinic vs nicotinic ACh antagonists upon ganglion cell activity in the frog retina 27: 2061.
Studying striate cortex neurons in behaving monkeys: benefits of image stabilization 27: 2081.

RECEPTOR POTENTIAL (SEE CONES; ELECTRORETINOGRAM; PHOTORECEPTORS; RODS)

REFRACTION
The optics of comparative ophthalmoscopy 27: 599.
Developmental aspects of experimental myopia in chicks: susceptibility, recovery and relation to emmetropization 27: 1139.
The refractive increments of bovine (*a-, (*b- and (*g-crystallins 27: 1539.
Experimentally induced myopia does not affect post-hatching development of the chick lens 27: 1779.
Spatial visual acuity of the falcon, Falco berigora: a behavioural, optical and anatomical investigation 27: 1859.
Accommodation in infants as measured by photorefraction 27: 2141.

RETINAL DISEASE (SEE PATHOLOGY)

ROD-CONE INTERACTION (SEE CONES; RODS)

RODS
Electrophysiological correlates of rod outer segment disc shedding in rabbit retina 27: 357.
Rod-cone interaction in monocular but not binocular pathways 27: 479.
The relationship of retinal sensitivity and rhodopsin in human infants

27: 697.
Rod and cone system contributions to oscillatory potentials: an explanation for the conditioning flash effect 27: 859.
Factors affecting the regeneration of rhodopsin in the isolated amphibian retina 27: 1085.
Interactions between the rod and the cone pathways in the cat retina 27: 1093.
Dependence of cone b-wave implicit time on rod amplitude in retinitis pigmentosa 27: 1105.
Two types of lamprey retina photoreceptors immunoreactive to rod- or cone-specific antibodies 27: 1237.
Visual pigment polymorphism in the guppy Poecilia reticulata 27: 1243.
Effects of IBMX on the ERG of the isolated perfused cat eye 27: 1421.
"Self-screening" of rhodopsin in rod outer segments 27: 1459.
A note on the action spectrum of human rod vision 27: 1471.
Rod influence in dichromatic surface color perception 27: 2153.

SACCADES (SEE EYE-MOVEMENTS, SACCADIC)

SACCADIC SUPPRESSION (SEE SUPPRESSION)

SCHEMATIC EYE (SEE OCULAR DIMENSIONS)

SCOTOPIC VISION
Pupillometric measures of retinal sensitivity in infants and adults with retinitis pigmentosa 27: 499.
The relationship of retinal sensitivity and rhodopsin in human infants 27: 697.
"Self-screening" of rhodopsin in rod outer segments 27: 1459.
A note on the action spectrum of human rod vision 27: 1471.
Visual acuity of human infants at scotopic, mesopic and photopic luminances 27: 1845.

SPATIAL FREQUENCY
Spatial frequency filtering and target identification 27: 87.
Motion capture anisotropy 27: 97.
Higher-harmonic adaptation and the detection of squarewave gratings 27: 249.
Simple reaction time to sinusoidal grating and perceptual integration time: contributions of perceptual and response processes 27: 269.
The responses of neurons in the cortex in the superior temporal sulcus of the monkey to band-pass spatial frequency filtered faces 27: 311.
Facilitation and masking of briefly presented gratings: time-course and contrast dependence 27: 369.
Position and spatial frequency in large-scale localization judgments 27: 417.
Influence of saccades on manual reactions--a reaction time and VEP study 27: 609.
The effect of grating spatial frequency on the early VEP-component CI 27: 727.
Temporal properties of spatial contrast vision 27: 765.
Spatial influences on colour opponent contributions to pattern detection 27: 829.
Visual resolution and sensitivity in a nocturnal primate (Galago) measured with visual evoked potentials 27: 845.
Effect of pattern luminance profile on the pattern ERG in man and pigeon 27: 883.
Statistical efficiency for the detection of visual noise 27: 1029.
The effects of optical degradation on the contrast sensitivity function measured at the fovea and in the periphery 27: 1179.
Perceptual latency and spatial frequency 27: 1279.
Is pattern masking predicted by the cross-correlation between signal and mask? 27: 1319.
Evidence for spatially local computations underlying discrimination of periodic patterns in fovea and periphery 27: 1343.
Distortion products in geniculate X-cells: a physiological basis for masking by spatially modulated gratings? 27: 1377.
What causes steroscopic tilt from spatial frequency disparity 27: 1619.
Response suppression by extending sine-wave gratings within the receptive fields of neurons in visual cortical area V3A of the macaque monkey 27: 1687.
The effects of optical vergence, contrast, and luminance on the accommodative response to spatially bandpass filtered targets 27: 1797.

Effects of contrast and spatial frequency on vernier acuity 27: 1817.
Implications of the Craik-O'Brien illusion for brightness perception 27: 1903.
The physical limits of grating visibility 27: 1915.
Summation of very close spatial frequencies: the importance of spatial probability summation 27: 1997.
Recovery from contrast adaptation: effects of spatial and temporal frequency 27: 2185.

SPATIAL VISION (SEE ALSO ACUITY)
Vernier acuity is less than grating acuity in 2- and 3-month-olds 27: 77.
Spatial frequency filtering and target identification 27: 87.
Opponent model for line interval discrimination: interval and vernier performance compared 27: 107.
Higher-harmonic adaptation and the detection of squarewave gratings 27: 249.
The responses of neurons in the cortex in the superior temporal sulcus of the monkey to band-pass spatial frequency filtered faces 27: 311.
Oculomotor and skeletal motor systems share one map of visual space 27: 393.
Position and spatial frequency in large-scale localization judgments 27: 417.
Scale invariant features of differential spatial displacement discrimination 27: 441.
Illusory contour orientation discrimination 27: 453.
Perception of random-dot symmetry and apparent movement at and near isoluminance 27: 547.
Shape recognition in amblyopia 27: 651.
Spatial information and uncertainty in anisometropic amblyopia 27: 661.
Is pattern masking predicted by the cross-correlation between signal and mask? 27: 1319.
Brightness of luminance distributions with gradual changes 27: 1589.
The detection of deviation from straightness in lines 27: 1659.
Response suppression by extending sine-wave gratings within the receptive fields of neurons in visual cortical area V3A of the macaque monkey 27: 1687.
Representation of edges of variable blur by neuroanal responses in the lateral geniculate body and the visual cortex of cats: limits of linear prediction 27: 1701.
Effects of field area and configuration on chromatic and border discriminations 27: 1835.
Summation of very close spatial frequencies: the importance of spatial probability summation 27: 1997.
Nonlinearity in human visual responses to two-dimensional patterns, and a limitation of fourier methods 27: 2181.
Vision beyond the resolution limit: aliasing in the periphery 27: 2193.

SPECTRAL SENSITIVITY
Response properties of C-type horizontal cells in the retina of the bowfin 27: 179.
Mesopic spectral responses and the Purkinje shift of macaque lateral geniculate nucleus cells 27: 191.
Aging and human macular pigment density. Appended with translations from the work of Max Schultze and Ewald Hering 27: 257.
Isolation of short-wavelength-sensitive cone photoreceptors in 4-6-week-old human infants 27: 469.
Optical density of human macular pigment 27: 705.
Spatial influences on colour opponent contributions to pattern detection 27: 829.
Isolation of opponent-colour mechanisms at increment threshold 27: 1017.
A multichannel microspectrophotometer for visual pigment investigations 27: 1047.
Macular pigment and reduced foveal short-wavelength sensitivity in retinitis pigmentosa 27: 1077.
Chromatic suppression of cone inputs to the luminance flicker mechanism 27: 1113.
Polymorphism of the middle wavelength cone in two species of South American monkey: Cebus apella and Callicebus moloch 27: 1263.
"Self-screening" of rhodopsin in rod outer segments 27: 1459.
A note on the action spectrum of human rod vision 27: 1471.
Researches on a unilaterally blue-blinded rhesus monkey 27: 1551.
Yellowing of the human lens: nuclear and cortical contributions 27: 1581.
Color vision polymorphism and its photopigment basis in a callitrichid

monkey (Saquinus fuscicollis) 27: 2089.
Ultraviolet receptors, tetrachromatic colour vision and retinal mosaics in the brown trout (Salmo trutta): age-dependent changes 27: 2101.

SPHERICAL ABERRATION (SEE ABERRATION)

STABILIZED VISION
The role of eye movements in motion detection 27: 747.
Studying striate cortex neurons in behaving monkeys: benefits of image stabilization 27: 2081.

STEREOPSIS
The resolution of ambiguous stereoscopic matches by interpolation 27: 285.
Interpolation and the detection of fine structure in stereoscopic matching 27: 295.
Stereoscopic contours and optokinetic nystagmus in normal and stereoblind subjects 27: 841.
Zero horizontal disparity in binocular depth mixture stimuli 27: 1207.
Depth attraction and repulsion of disparate foveal stimuli 27: 1361.
Presenting stereoscopic stimuli with one monitor 27: 1391.
What causes steroscopic tilt from spatial frequency disparity 27: 1619.
Effects of movement in the background field on long-range apparent motion 27: 1679.
Detection threshold differences to crossed and uncrossed disparities 27: 1683.
The binocular depth stereoacuity of the pigeon and its relation to the anatomical resolving power of the eye 27: 1967.
Visual persistence of stereoscopic stimuli: electric brain activity without perceptual correlate 27: 2109.

STILES-CRAWFORD EFFECT (SEE DIRECTIONAL SELECTIVITY)

STRABISMUS (SEE ALSO AMBLYOPIA)
Effects of luminance on the visual acuity of strabismic and anisometropic amblyopes and optically blurred normals 27: 1543.
Proprioceptive knowledge of eye position 27: 1737.

SUMMATION, PROBABILITY
On the relation between summation and facilitation 27: 119.
Receptive field size of human motion detection units 27: 621.
Temporal properties of spatial contrast vision 27: 765.
Summation of very close spatial frequencies: the importance of spatial probability summation 27: 1997.

SUPPRESSION (SEE ALSO BINOCULAR RIVALRY)
Chronometric analysis supports fusion rather than suppression theory of binocular vision 27: 781.
Perceptual "blankout" of monocular homogeneous fields (Ganzfelder) is prevented with binocular viewing 27: 967.
Response suppression by extending sine-wave gratings within the receptive fields of neurons in visual cortical area V3A of the macaque monkey 27: 1687.

TECHNIQUES
A whole mount method for sequential analysis of photoreceptor and ganglion cell topography in a single retina 27: 9.
A new technical approach to monkey visual training 27: 41.
A versatile programmable pattern generator 27: 125.
A head-mounted device for measurement of pointing to visual targets without seeing the pointing arm 27: 307.
A retinal smear technique for varying grating contrast 27: 681.
Human gaze stability in the horizontal, vertical and torsional direction during voluntary head movements, evaluated with a three-dimensional scleral induction coil technique 27: 811.
Presenting stereoscopic stimuli with one monitor 27: 1391.

TEMPORAL DISCRIMINATION
Velocity perception and discrimination: relation to temporal mechanisms 27: 1491.
Discrimination of differences in speed and flicker rate depends on directionally selective mechanisms 27: 1881.

TEXTURE PERCEPTION

The effect of orientation and motion of enclosed texture on induced movement 27: 1369.

THRESHOLD (SEE CONTRAST SENSITIVITY; DETECTION THRESHOLD; INCREMENT THRESHOLD)

TRITANOPIA (SEE DICHROMACY)

TROXLER EFFECT (SEE STABILIZED VISION)

VELOCITY (SEE MOVEMENT PERCEPTION)

VERNIER ACUITY (SEE HYPERACUITY)

VISUAL DIRECTION
Afterimage movement during saccades in the dark 27: 215.
A head-mounted device for measurement of pointing to visual targets without seeing the pointing arm 27: 307.
Oculomotor and skeletal motor systems share one map of visual space 27: 393.
Planning sequences of saccades 27: 1327.

WAVELENGTH DISCRIMINATION (SEE COLOR DISCRIMINATION)
